REASONS FOR ALLOWANCE

1. The following is an examiner's statement of reasons for allowance: The claims are directed to methods for identifying a human subject having larger mean arterial pressure rises in response to psychological stress, comprising detecting the presence of at least one serotonin transporter gene promoter long allele in the human subject, wherein the detection of at least one serotonin transporter gene promoter long allele in the human subject identifies the human subject as having an increased likelihood of having larger mean arterial pressure rises in response to psychological stress, as compared to human subjects homozygous for the short allele, as well as methods for identifying a human subject having an increased likelihood of developing a cardiovascular disease in response to having larger mean arterial pressure rises in response to psychological stress by detecting the presence of at least one serotonin transporter gene promoter long allele as set forth above. The claims are additionally limited to hypertension, coronary artery disease and stroke. The closest prior art is that of each of Arinami, Comings I, Comings II, and Hanna, each cited in the previous office action. However none of the cited reference teach or provide any guidance as to subjects under psychological stress nor do they individually or together teach or suggest that subjects with at least one serotonin transporter long allele are at increased risk of having larger mean arterial pressure rises in response to psychological stress.

The rejection under 35 USC 112, first paragraph, made in the previous office action is withdrawn in view of the declaration filed under 37 CFR 1.132 by Dr. Redford Williams. Particularly, the evidence provided at section 5 and 6 of the declaration shows that both males and females that carry at least one serotonin transporter (5HTTLPR) long

allele exhibited larger mean arterial pressure rises in response to psychological stress protocols. The rejection provides evidence that the statistical interaction between 5HTTLPR genotypes and sex were not significant, showing that the effect of genotype between *males and females* was not different and that therefore, the effects of 5HTTLPR genotypes on mean arterial pressure rises can be tested in males and females.

Accordingly, the enablement rejection is withdrawn.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Patent applicants with problems or questions regarding electronic images that can be viewed in the Patent Application Information Retrieval system (PAIR) can now contact the USPTO's Patent Electronic Business Center (Patent EBC) for assistance. Representatives are available to answer your questions daily from 6 am to midnight (EST). The toll free number is (866) 217-9197. When calling please have your application serial or patent number, the type of document you are having an image problem with, the number of pages and the specific nature of the problem. The Patent Electronic Business Center will notify applicants of the resolution of the problem within 5-7 business days. Applicants can also check PAIR to confirm that the problem has been corrected. The USPTO's Patent Electronic Business Center is a complete service center supporting all patent business on the Internet. The USPTO's PAIR system provides Internet-based access to patent application status and history information. It also enables applicants to view the scanned images of their own application file folder(s) as well as general patent information available to the public.
